Expanded mesh ceilings are one of the elements that brings value to the interior designs in terms of lighting and air circulation thanks to its visible and transparent structure. It works as a cover for the services equipments in the ceiling void with its semi-visible surface. As metal can be shaped and curves as requested, it provides plenty of design options to the architects. Expanded meshes have been designed not only for ceilings but also for the exterior facades. Very unique ideas can be realized with different mesh sizes available.
